HYUNDAI L&C

LIVING & CULTURE

Start your journey with Hyundai L&C,
to discover the most contemporary interior design,
where the life becomes the culture.

HYUNDAI L&C **Bodaq**

26-27 Trend Summary

Care-full

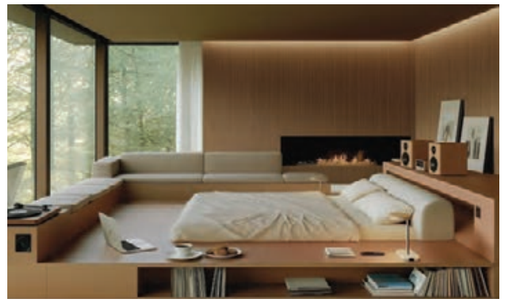

Amid social changes, health, relaxation, and emotional recovery have become priority, while the advancements in technology and infrastructure are expanding the role of spaces - from personal to social connections, health care and wellness. Reflecting this, Hyundai L&C's trend analysis for this year identifies the in-trend theme as **'Care-full : A Space Filled with Care'**, suggesting a new perspective on space design with daily life stability, relationship restoration & medical · health care experiences. Explore the evolving trend toward Human-centered design filled with meticulous attention and sensitivity.

Ego Care

A private space of rest for personal recovery.

01

The warm, medium wood toned interior film adds a delicate grain throughout the space, creating a deep relaxing atmosphere.

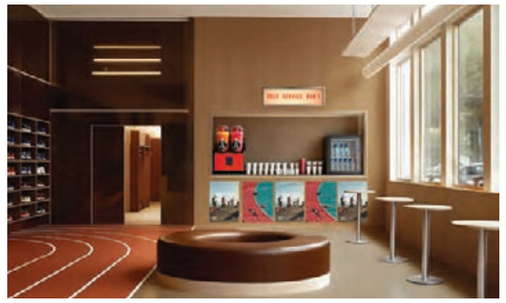

96p ||| Teak **W953**

Connect Care

A space for fostering emotional connection.

02

LW Long Wood series articulate a community lounge that balances generous spatiality with a refined sense of comfort.

50p Alpine Oak **LW113**

Bio Care

A wellness space for the balance of the body.

03

The subtle concrete pattern creates a calming visual environment, turning the act of staying in the space into a healing wellness experience.

11p Moon Stone **PNC55**

Environment

We care the Environment

Eco-Label Certification

Bodaq Fire-Retardant Interior Film is an eco-friendly product certified with the Eco-Label, designed to minimize the content of harmful substances. The Environmental Label Certification is a recognized standard established to reduce resource waste & environmental pollution, which is a key criterion prioritized in material selections by public institutions. Bodaq Fire-Retardant Interior Film meets these stringent environmental and legal standards, offering a choice that can be applied with confidence in any public, commercial, and residential places.

※ In accordance with Article 6 of the Act on the Promotion of Green Product Purchases, public institutions are required to give priority to purchase green products when the supply is available.
※ Eco-Label Certification enables consumers to accurately identify the product & the service with superior environmental performance.
※ Discover our Eco-Label Certified Bodaq products and detailed technical information on the official website : (https://m.ebodaq.com/Community/TechnologyData)
※ Not intended for direct food contact - certification status may vary by Bodaq series, referring the technical date sheet on Bodaq official website is required.
※ Applicable Series : APZ, BLC, CP, HS, LM, LS, LW, NS, PM, PNC, PNT, PTW, RM, S, SF, SL, SMT, SPW, VM, W, ZSW, ZX

Environmental Product Declaration (EPD Certification)

EPD Certification evaluates the environmental impact of energy and resources across the entire product life cycle - including raw materials sourcing, production, distribution, use, and disposal. Bodaq Interior Film not only holds EPD Certification, but also continuously pursues improvements in environmental performance.

Eco-Friendly Building Materials Certification (HB Mark)

Bodaq Interior Film (non-fire-retardant) has achieved the highest grade in substance verification test in compliance with the Eco-Friendly Building Materials Certification (HB Mark) regulations established by the Korea Air Cleaning Association, by utilizing water-based adhesive applications.

Safety

Your Safety is our Priority

Fire-Retardant Performance Test

Bodaq Interior Film (fire-retardant) products, only films that have passed the Fire-Retardant performance test conducted by the Korea Fire Institute (KFI) are allowed to be distributed with the certification mark. For the corresponding results notification of each Fire-Retardant production lot, please contact your nearest Bodaq Interior Film distributor.

Fire-Retardant Performance [KFI Certification]				
Char Length ≤ 20 cm	Char Area ≤ 30 cm^2	Afterglow time ≤ 5 seconds	Afterflame time ≤ 3 seconds	Smoke density 200 Ds

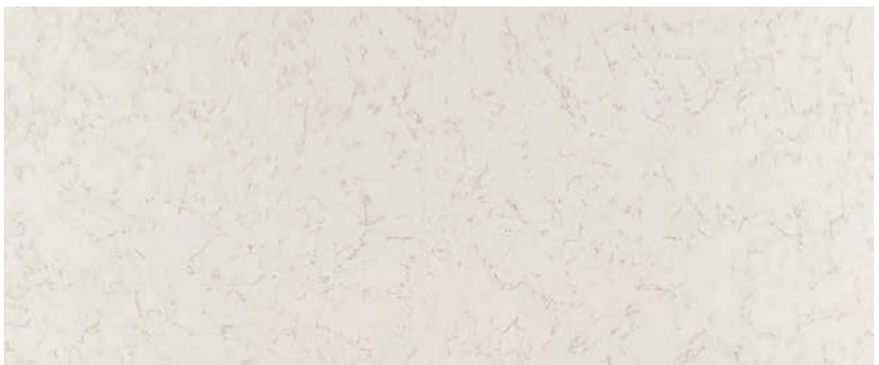

Stain-Resistant					
Soy Sauce	Coke	10% Hydrochloric Acid	Coffee	5% Ethanol	Wine Vinegar
No changes					

※ Certificates of performance, construction specifications, and technical data sheets can be found on the Bodaq official website (https://m.ebodaq.com/Community/TechnologyData), either can be requested to our headquarters or authorized distributors.

Installation Guidelines

BODAQ

Installation Precautions

- Check the condition of the substrate (product name, product type, surface conditions) before installation. (If any issues are found, notify the supplier.)
- For MDF, ensure the density is uniform, as differences in density can affect adhesion and stability during installation.
- Follow the following recommended cleaning procedures for the substrate
  - -For film covering and ABS doors, clean the surface of any contaminants and treat any damaged areas before installation.
  - ※ When using sandpaper on ABS doors, avoid causing uneven surfaces.
  - -For MDF, PB, and similar materials, smooth rough surfaces with sandpaper or apply putty before installation.
- Be cautious of color differences between production lots. It's best to avoid mixing different lots during installation.
- When exposed to low temperatures during winter, the surface may crack, and adhesion strength may decrease. Take extra care.
- Avoid substrates with scratches or wax components, as these can reduce adhesion.

Primer Stage

- It is recommended to use Bodaq Primer, produced by Hyundai L&C, for optimal performance and stability.
- MDF, PB, and other wood materials have a high absorption rate, so 2-3 coats should be applied on cut edges.
- After applying the primer, allow at least 2 hours for it to dry thoroughly before applying the film.
  [※Store Bodaq Primer (water-based) in a cool, shaded area, and do not use if the product has frozen. Take care during winter storage.

Installation (Adhesion) Stage

- Maintain a room temperature (15℃-23℃) to eliminate any residual moisture on the wall.
- For products like, OGW, SPW, LW, SMT, UMI, PNC, and PNT, which have special coatings, ensure that the temperature is maintained before installation.
- When installing special products, apply primer, allow it to dry, and use extra pressure to finish the installation.
- Pay special attention to corners, as insufficient pressure may cause peeling.
- Avoid moisture and direct sunlight during installation, and do not use the film outdoors.
- During hot summer months, sealing the space immediately after installation can lead to high temperatures, potentially causing bubbles or peeling. To prevent this, ensure adequate ventilation throughout the process.

Product-Specific Usage Considerations

OGW / SPW / LW / PNC / PNT Products (Premium Coating Type)	• Handle with care to prevent damage to the special coating layer during installation, particularly when fitting into corners. • The surface features deep embossing, which may lead to tearing if subjected to excessive pressure or frequent removal and reattachment. • Clean the surfaces using mild detergent or water to avoid damage.
SMT Products (Matte Special Coating Type)	• The special coating may hinder the squeegee to smoothly slide during installation, so be sure to apply adequate pressure. • Avoid contamination between the substrate and the adhesive surface to prevent marks or protrusions. • The special coating may make overlapping installations difficult, so use caution. • The product may not return to its original shape if wrinkled or marked, so handle it with care during storage and use. • Be aware that F/R and General versions may have different surface textures.
RF Products (Woven Type)	• Be careful of scratches when using sharp tools due to the material's texture. • The thick material may be difficult to bend or overlap, and cutting it may be challenging. • There is no protective layer on the surface, so ensure careful use of the squeegee to avoid surface damage. • Tunnelling may occur if the fabric is rewound after use.
NF Products (Fabric Type)	• The fabric material may unravel during cutting, leaving threads behind. Applying pressure with the squeegee may be difficult. • The product is designed for flat installations and may be difficult to bend or cut due to its thickness. • Overlapping may be difficult due to the water-repellent and F/R coating on the surface. • Handle carefully to avoid surface damage, as there is no film layer on the surface.
VM / RM Products (Pearl Type)	• The pearl finish may show color variations depending on the distribution of the pearl pigments on the film surface. • Excessive detachment after overlapping installation could cause peeling.
UMI Products (Premium Real Metal Type)	• To maximize surface effect, installation must be carried out in a very clean environment to avoid dents or protrusion marks. • If the product is wrinkled or dented, it cannot be restored due to its special structure. Handle with care during storage and use. • The product is harder than standard products, so bending or overlapping may be difficult. • Tunnelling may occur if the fabric is rewound after use.
HS Products (High Gloss Type)	• Due to the high hardness of the product, sufficient pressure must be applied to prevent corner lifting.
ECF Products	• To maximize surface effect, installation must be carried out in a very clean environment to avoid dents or protrusion marks. • If the product is wrinkled or dented, it cannot be restored due to its special structure. Handle with care during storage and use. • The product is harder than standard products, so bending or overlapping may be difficult. • Tunnelling may occur if the fabric is rewound after use. • Handle with care to prevent damage to the special coating layer during installation, particularly when fitting into corners. • Clean the surfaces using mild detergent or water to avoid damage.

Other Precautions

- There is a risk of discoloration due to UV exposure.
- After installation, maintain room temperature for at least 1-2 days to allow the film to set properly.

BODAQ Exterior Film

EXF Products

Installation Precautions

- Installation is recommended on smooth, non-porous, and high-energy surfaces.
- Check the condition of the substrate (product name, product type, surface conditions) before installation. (If any issues are found notify the supplier.)
- Follow the following recommended cleaning procedures for the substrate
  - -Remove existing silicone caulking and residues, evenly fill dents or damaged areas, and sand the surface to remove contaminants and residues.
- Be cautious of color differences between production lots. It's best to avoid mixing lots during installation.
- When exposed to low temperatures during winter, the surface may crack, and adhesion strength may decrease. Take extra care.
- Avoid substrates with scratches or wax components, as these can reduce adhesion.

Primer Stage

- Apply the material thoroughly, focusing on edges, which are more prone to foreign matter intrusion.
- After applying the primer, allow at least 2 hours for it to dry thoroughly before applying the film.

Installation (Adhesion) Stage

- Installation is recommended at room temperature (15℃-23℃).
- Remove surface moisture caused by condensation before installation.
- Avoid moisture and direct sunlight during installation.
- Pay special attention to corners, as insufficient pressure may cause peeling.
- When applying silicone caulking after film attachment, cover at least 2 mm of the film with silicone.

For performance certifications and construction specifications, please contact Hyundai L&C.
